

CASE STUDY

RAMA HOSPITAL

Project Description

Rama Hospital in Thailand has transformed its communication and patient engagement with the installation of three Hisense LED walls, each measuring 7.8m wide by 2.36m tall. These large-format displays provide crystal-clear visuals that ensure important information, updates, and multimedia content are delivered with maximum impact. The LED walls create a modern and welcoming environment within the hospital, offering both patients and visitors an enhanced experience through dynamic digital signage. Their scale and clarity make them ideal for sharing health information, hospital announcements, and engaging educational content.
