

CASE STUDY

IMC KREMS UNIVERSITY OF APPLIED SCIENCES

Project Description

At IMC KREMS University of Applied Science in Austria, an impressive curved Hisense LED wall has been installed within the university's media training environment, creating a highly immersive and visually impactful teaching space. The large-format curved display delivers exceptional brightness, colour consistency and seamless visuals, providing students with a realistic broadcast and media production setting. Designed for professional training applications, the installation supports hands-on learning while elevating the university's state-of-the-art media facilities.
