

CASE STUDY

NATIONAL INSTITUTE OF
EDUCATION (NIE)

Project Description

The National Institute of Education (NIE) in Singapore has enhanced its teaching and presentation facilities with the installation of two Hisense 136" All-in-One LED displays. The displays are linked together to enable dual presentation, offering educators and presenters a versatile platform to share multiple sources of content side by side. This innovative setup provides outstanding visual clarity, vibrant colour, and seamless flexibility, making it ideal for lectures, collaborative sessions, and large-scale presentations. The solution not only improves the learning experience but also demonstrates the adaptability of Hisense All-in-One LED technology in education environments.
